## Lab 3: Pavlo Shelemba

Link to my Digital-electronics-2 GitHub repository:

https://github.com/xshele01/Digital-electronics-2

## Data types in C

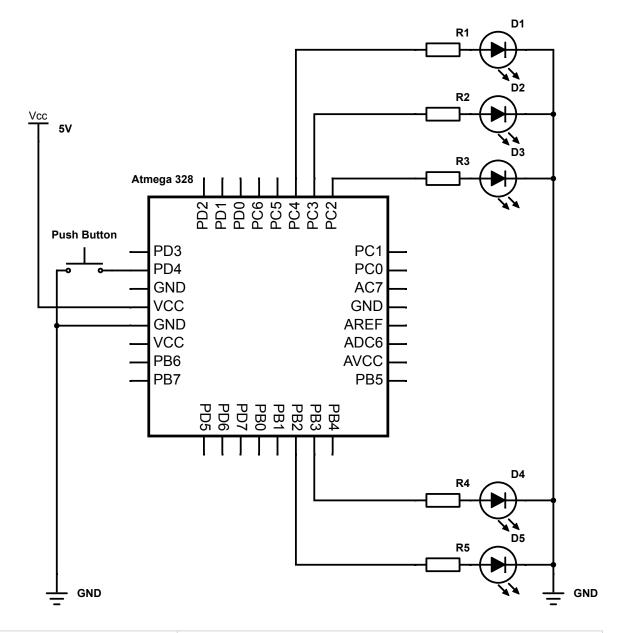

Data type	Number of bits	Range	Description
uint8_t	8	0 to 255	Unsigned 8-bit integer
int8_t	8	-128 to 127	Signed 8-bit integer
uint16_t	16	0 to 65,535	Unsigned 16-bit integer
int16_t	16	-32,768 to 32,767	Signed 16-bit integer
float	32	-3.4e+38 to 3.4e+38	Single-precision floating-point
void	-	-	No type

## **GPIO** library

- 1. The difference between the declaration and the definition of the function in C:
  - Function declaration tells the compiler about the existence of a function.
  - Function definition actually implements a function.
- 2. Part of the C code, which uses my GPIO library to toggle LEDs when push button is pressed. Otherwise, the values of the LEDs do not change. Push button is connected to port D:

## **Traffic light**

1. Scheme of traffic light application (connection of AVR device, LEDs, resistors, push button and supply voltage):

Component	Description	
D1, D4	Red LEDs	
D2	Yellow LED	
D3, D4	Green LEDs	
R1-R5	Current limiting resistors
